Alexandria, VA 22313-1450

Dear Sir:

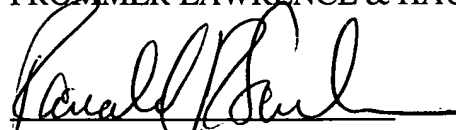

The Issue Fee for the above application was paid on September 12, 2005. However, we have not as yet received an Issue Notification.

In the interim in connection with this application, the applicants would like to make known that in the case of a gearbox having several reduction stages, the rotatable elastic coupling means may be located between the first stage and the last stage. This allows to make easier the design of the rotatable elastic coupling means. The more the rotatable elastic coupling means is located near the motor, the less the torque through the rotatable elastic coupling means is and the better the filtering of the audible vibrations can be. The last stages of the reduction gear operating at a low speed produce few audible vibrations. Thus no elastic coupling means is necessary after these stages.

It is not believed a fee is due for this submission. However, if such is not the case, please charge any fee that may be needed, or credit any overpayment, to our Deposit Account No. 50-0320.

Respectfully submitted,  
FROMMER LAWRENCE & HAUG LLP
